Art Unit: 1653

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-15, drawn to the synthetic polynucleotide and a method of recombinantly producing the polynucleotide, are classified in class 435, subclass 91.1.
- II. Claims 16-25, drawn to a method of applying the synthesized polynucleotide to α -galactosidase deficiency related disorder or disease, are classified in class 514, subclass 44.

The inventions are distinct, each from the other because of the following reasons:

Invention I and Invention II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the synthesized polynucleotide can be utilized in a materially different process, as a probe in hybridization analysis of the related sequences, for example.

A telephone call was made to Louis Myers on June 18, 2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
